

JOYCEclinic FF

Single-Patient-Use Mask

JOYCEclinic FF No compromises.

With our single-patient-use full-face mask for acute non-invasive ventilation, you will experience the familiar quality from Löwenstein Medical.

JOYCEclinic FF allows fast and simple mask fittings and a secure, comfortable fit even at pressures of up to 50 hPa.

The headgear, which remains firmly in place even at high pressures, can be disconnected quickly and simply by pulling on the highly visible quick-release cord.

Single-patient-use mask prevents cross-contamination. In the hospital where cost pressure is high, you needn't make any compromises with patient safety.

- Prevention of cross-contamination
- Pressure-stable mask cushion and headgear
- Quick-release cord

With four different, interchangeable elbow adapters, you'll find the right mask variant for every situation and device combination.

JOYCEclinic FF comes pre-assembled in three sizes in the variants non-vented, non-vented with AAV (Leakage 1) and vented with AAV (Leakage 2). You can use the fitting template to make a good fit quickly and reliably. You don't even touch the mask, thanks to the two-chamber bag.

Available as a practical accessory, the endoscope adapter permits bronchoscopy without interrupting ventilation. The elbow adapters NV, NV+ AAV and Vented also are available as replacement parts.

All masks are available in sets of 10 without the two-chamber bag. Each set comes with Instructions for use and a fitting template.

- Three sizes
- Four interchangeable elbows
- Fitting template
- Two-chamber bag
- Single mask or set of 10 masks

Elbow Adapter

With the lever on the retaining ring, the elbow can be loosened easily and changed quickly at any time.

NV without AAV*

NV with AAV* (Leakage 1)

V with AAV* (Leakage 2)

Endoscope Adapter

*AAV = Anti-Asphyxia Valve

Rotating Joint Adapter

A CPAP tube can be used with the help of the integrated rotating joint adapter in all vented variants.

Rotating Joint Adapter

Which elbow should I use?

NV elbow

- Double Patient Circuit with separate inspiration and expiration and expiration valve at device end of tube

- Single Patient Circuit with expiration valve close to patient

- Single Patient Circuit with CO₂ leakage

NV + AVV elbow

- Single Patient Circuit with CO₂ leakage and additional safety in event of device failure (Anti-Asphyxia Valve)
- Standard combination for ventilators with leakage system

- Single Patient Circuit with expiration valve close to patient may not be used.
- The flow is not high enough to hold open the anti-asphyxia valve.

Vented elbow

- Adapter and CPAP tube for use with prisma VENT or comparable ventilators
