

3M™ Tegaderm™ Transparent I.V. Dressings

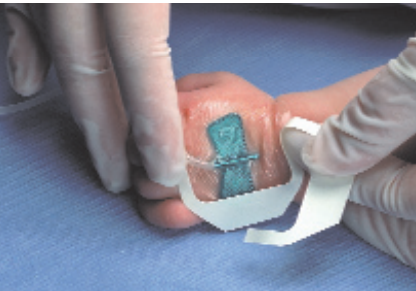

Successful intravenous therapy requires confidence that the line will remain securely in the vein and that the site of entry remains free from infection, trauma and phlebitis. The Tegaderm range of I.V. dressings feature innovative design characteristics to meet these challenges for both peripheral and central applications.

Tegaderm 1610 dressing

Reinforced transparent I.V. dressing with two sterile tape strips for fixation of ported and non ported I.V. cannulae. Designed specifically with children in mind.

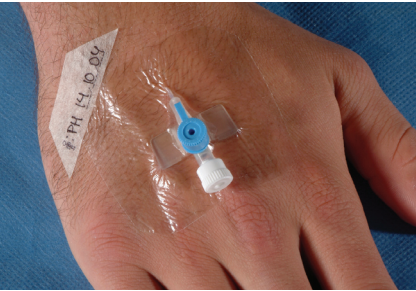

- Peripheral I.V. therapy

Tegaderm 1622W dressing

Transparent film dressing for fixation of peripheral I.V. cannulae.

- Peripheral I.V. therapy

Tegaderm 1623W dressing

Transparent film dressing for fixation of ported peripheral I.V. cannulae. Includes record label for documenting dressing change.

- Short-term peripheral I.V. therapy

Tegaderm 1626W dressing

Transparent film dressing in general-purpose size for jugular and subclavian central venous catheters. Includes record label for documenting dressing change.

- Central venous I.V. therapy

Tegaderm 1633 dressing

Reinforced transparent I.V. dressing with two sterile tape strips, provides a reliable combination for extended catheter security. Includes record label for documenting dressing change.

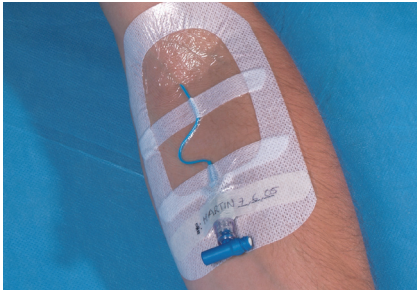

- Peripheral I.V. therapy

Tegaderm 1635 dressing

Reinforced transparent I.V. dressing for secure fixation of central venous catheters with two sterile tape strips for extra security. Includes record label for documenting dressing change.

- Central venous I.V. therapy

Tegaderm 1650 dressing

Reinforced transparent I.V. dressing for secure fixation of PICC and midlines. Includes two sterile tape strips for extra security and record label for documenting dressing change.

- Long-term I.V. therapy
