McDavid™ 421 knee support with stays

Provides moderate support, helping to relieve symptoms and aid recovery from chondromalacia, patellar subluxation and tendonitis. The spring steel stays provide reinforced support. A padded buttress supports the patella, while the elastic hook and loop straps ensure outstanding fit.

KNEE BRACES

Patella-femoral support

BioSkin™ Q brace™ patellofemoral knee front closure

Easy to apply and has a unique, multi-functional design to increase patella-tracking. The "T" strap prevents dislocation and may be secured in various positions to regulate the direction of the traction on the patella. The design of the brace causes the force of traction to increase as the knee continues its range of motion. Ideal for anterior knee pain, patella subluxation and patella tracking.

DONJOY® reaction knee brace

Utilises an elastomeric web design, which absorbs shock and shifts the peak loads away from the painful area of the knee. This dispersion of energy helps reduce anterior knee pain. It dynamically stabilises the patella on all sides, thus bringing the patella into proper tracking position to reduce pain caused by general patellofemoral instabilities. Ideal for chondromalacia patella, quadriceps or patella tendonitis/tendinosis, Osgood-Schlatter disease, general patellofemoral tracking issues and mild OA.

KNEE BRACES OVER \$115

Moderate-high support

BioSkin™ hinged knee skin front closure

One of the lightest hinged knee braces on the market. Bi-centric, aluminum hinges are lightweight and provide extra support to knees with ACL, MCL and other ligament damage. The front closure brace allows for easy application and the level of compression can be adjusted with the front closure wrap and anchoring straps.

BioSkin™ crossfire hinged knee brace front closure

Optimal support for knee instability. This brace protects the MCL, ACL and other ligaments, providing stability while limiting unwanted twisting of the knee joint. It has a wrap-around design for a custom fit and a donning sleeve for light compression and easy application.

High support

BioSkin™ gladiator open patella front closure

Uses a rigid hinge to protect knee ligaments, including after reconstruction. The rigid strapping system firmly anchors the Gladiator to the leg, avoiding the need for larger, more expensive braces. Pins in the hinges may easily be set to limit flexion and/or extension. Ideal for knee ligament tears or sprains as well as moderate to severe knee instability.
