

URIPOT® URIKONE®

from Rocket Medical

The Rocket URIKONE® & URIPOT® offer cost effective, ready to use urine collection in two styles to meet the widest range of patient needs.

URIPOT®

URIPOT® has an anatomically designed filling pot with soft, smooth edges and is warm to the touch, making sampling easier and more comfortable for the female patient. A special non return valve makes gradual filling simple and helps prevent overflow and spillage.

URIKONE® offers a simple, traditional cone design ideal for male urine collection

Both designs feature:

UNIVERSAL CONTAINER, used as standard by most laboratory services, makes urine collection easy and cost effective.

PRE-ASSEMBLED: simple and ready to use, suitable for either male or female.

INCLUDES AQUEOUS PRE WIPE for easy, rapid cleansing of the genital area prior to sampling.

PAEDIATRIC & NEONATAL USE: Both Uripot® and Urikone® are suitable for paediatric and neonatal collection when used under nursing or parental supervision to ensure adequate sample collection and child safety.

URIKONE®
